

RUTF for Life

Bringing life to children in the Democratic Republic of Congo

Thank you Food for Famine for your gift of Ready-to-Use Therapeutic Food (RUTF) that is helping bring life to severely acute malnourished children living in Gbadolite and Mitwaba in the Democratic Republic of Congo (DRC).

World Vision DRC and many communities are extremely grateful for RUTF as it continues to be distributed to children in need.

To date, 9 health centers have received RUTF and more than 600 children have benefited!

VIVIANNE's Story

Vivianne was only a year and half when she was admitted to the hospital in February 2014. The above picture (left) shows Vivianne malnourished and suffering in pain until she received help from World Vision and Food for Famine. Vivianne was admitted to the Health Facility Center of Mitwaba, a 78 km hike from her home. She received medical treatment and was provided RUTF during her two week stay in the hospital. Today, Vivianne pictured above (right), is healthy and doing well. She is playing and laughing. During a visit from our World Vision team, Vivianne's mother expressed her deep gratitude for our help and the RUTF she received. She told our team, with tears in her eyes, that if her daughter had not received help she would have died. Thank you for truly helping to give life back to Vivianne.
